## Daily Report

Today, I added multiple issue tickets related to the APC web system. While doing so, I received feedback from Sir Raffy regarding proper ticket documentation. He emphasized that tickets should not only contain a brief description but should also clearly include the steps to reproduce, actual results, expected results, and, when applicable, suggested resolutions. I took note of this and will apply it consistently in future ticket submissions.

I also reviewed new additions to existing tickets, particularly those related to the streamer account functionality in LootBx, which requires further testing and validation. In addition, I continued checking and resolving tickets marked as Fixed and Updated to ensure that implemented changes were functioning as intended.

At present, there are no new tasks for the two assigned sites, BHND THE WORK and Sarah Digital, as they are still not in the staging phase. I will continue to monitor their status and proceed with testing once they become available.
